EVALUATION OF MAPS OF SOUTHWEST JAPAN

(Kyushu, Shikoku, and Honshu south of 36°N. and west of 138°E.)

1. International Map of the World, 1:1,000,000; Japanese Imperial Land Survey, 1927-1937. Threesheets of this series published by the Land Survey cover all of Southwestern Japan. The sheets were compiled from original Japanese sources such as the 1:200,000 and 1:500,000 maps, and Japanese Imperial Admiralty Charts. Relief is shown by gradient tints. English text (Romaji transliteration). The series is generally reliable considering the scale, but is not as up to date as the Eastern Asia series by the Army Map Service at the same scale.
2. Eastern Asia, 1:1,000,000, Army Map Service, 1944. Three sheets, based on the sheet layout of the International Map of the World, cover Southwest Japan. The sheets were compiled from Japanese sources, and were corrected in part from supplemental intelligence. English text (Romaji). Relief is shown by gradient tints. Important details are considered factually correct.
3. Japanese Naval Air Chart, 1:500,000; Imperial Japanese Navy, 1937-38. Four sheets cover Southwest Japan. Compiled from Japanese sources with corrections from Japanese Hydrographic Charts to 1938. This series has been reprinted by the Army Map Service and issued in 1941 with airfield and seadrome information corrected to 1940. The series shows relief by Hill Shading, and the AMS reprint has a somewhat inaccurate English transliteration overprint.
4. Central Japan, 1:250,000 (AMS L571); Army Map Service, 1943-1944. Thirty-nine sheets covering the entire area of Southwest Japan are part of a larger series covering all of Japan Proper, Formosa, and Korea. The series was compiled from Japanese Imperial Land Survey maps, 1:50,000 and 1:200,000 dated 1910 to 1939; Japanese Hydrographic Charts dated 1925 to 1935; U. S. Hydrographic Charts dated 1925 to 1943; and was corrected from Military Intelligence information to 1943. Relief is shown by contours except in limited areas where contours are omitted on the original Jap sources. English (Romaji) is based on transliterations from the 1:50,000 Japanese Imperial Land survey maps. Communication information is questionable as little up-to-date information is available. Topography, control, and population breakdown is dependable.
5. Japanese Empire, 1:200,000; Japanese Imperial Land Survey, 1890-1939. Approximately 47 sheets cover all of Southwestern Japan. These sheets were compiled from survey at the scale of 1:50,000 or larger. Relief is shown by contours and hill shading (green) combined. Text is Japanese. This series, together with the 1:50,000 by the same publisher, are the most reliable complete coverage of the Japanese maps.
6. Japanese Empire, 1:200,000; Japanese Imperial Geological Survey, 1891-1921. Approximately 34 sheets cover two-thirds of the area and are based on topographic surveys by the Imperial Land Survey and on geological surveys.

25X1

Relief is shown by contours and certain areas are contoured on these older sheets which are not contoured on the I.L.S. 1:200,000 and 1:50,000 maps. Text is partially Japanese and partially English (Romaji).

7. Japanese Empire, 1:75,000; Japanese Imperial Geological Survey; 1922-1939. Approximately 55 scattered sheets on southwest Japan are based on Topographic Surveys and show areal geology. Relief is by contours and text is both Japanese and English.

8. Japanese Empire, 1:50,000; Japanese Imperial Land Survey, 1897-1940. Southwest Japan is entirely covered with the exception of a few missing sheets, by this series. The sheets are based on large scale surveys and show accurate delineations. Relief is by contours except in limited Japanese restricted areas. Text is Japanese. This series, together with the 1:200,000 series by the same agency, is the most reliable complete coverage of the Japanese maps.

9. Kyushu, 1:50,000, (AMS L772); Army Map Service, 1944. Reprints in black and white with grid, transliteration, and border information overlay in purple for all of Kyushu are published by the Army Map Service. Other similar series (AMS L774 and L775) are being prepared by AMS.

10. Japanese Empire, 1:25,000; Japanese Imperial Land Survey, 1911-1938. Partial coverage (approximately 450 sheets) is available on Southwest Japan. Topography is shown by contours and all details are from survey at 1:25,000. Text is Japanese. For the limited areas covered these maps are considered dependable, but not up to date.

11. Central Honshu and Southern Honshu, 1:25,000 (AMS L874 and L875); Army Map Service, 1944. Sixty-five sheets are in process of being redrafted from the original Japanese sources, and cover scattered areas, mainly around important settlements.
